INSTALLATION

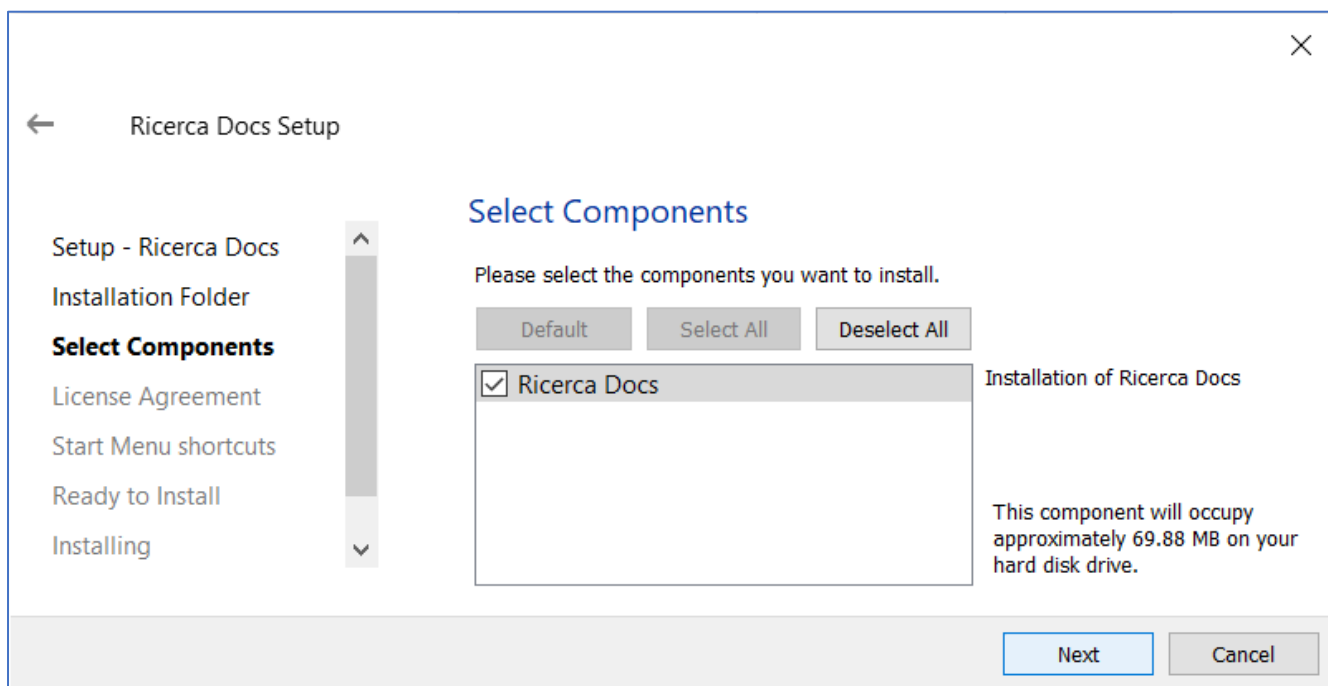

Once you unzip the file, navigate to distribution folder, and double click the RicercaDocs.exe package installer

If your installer is corrupted please visit the GitHub release page to download latest functional binary release, [HERE](#)

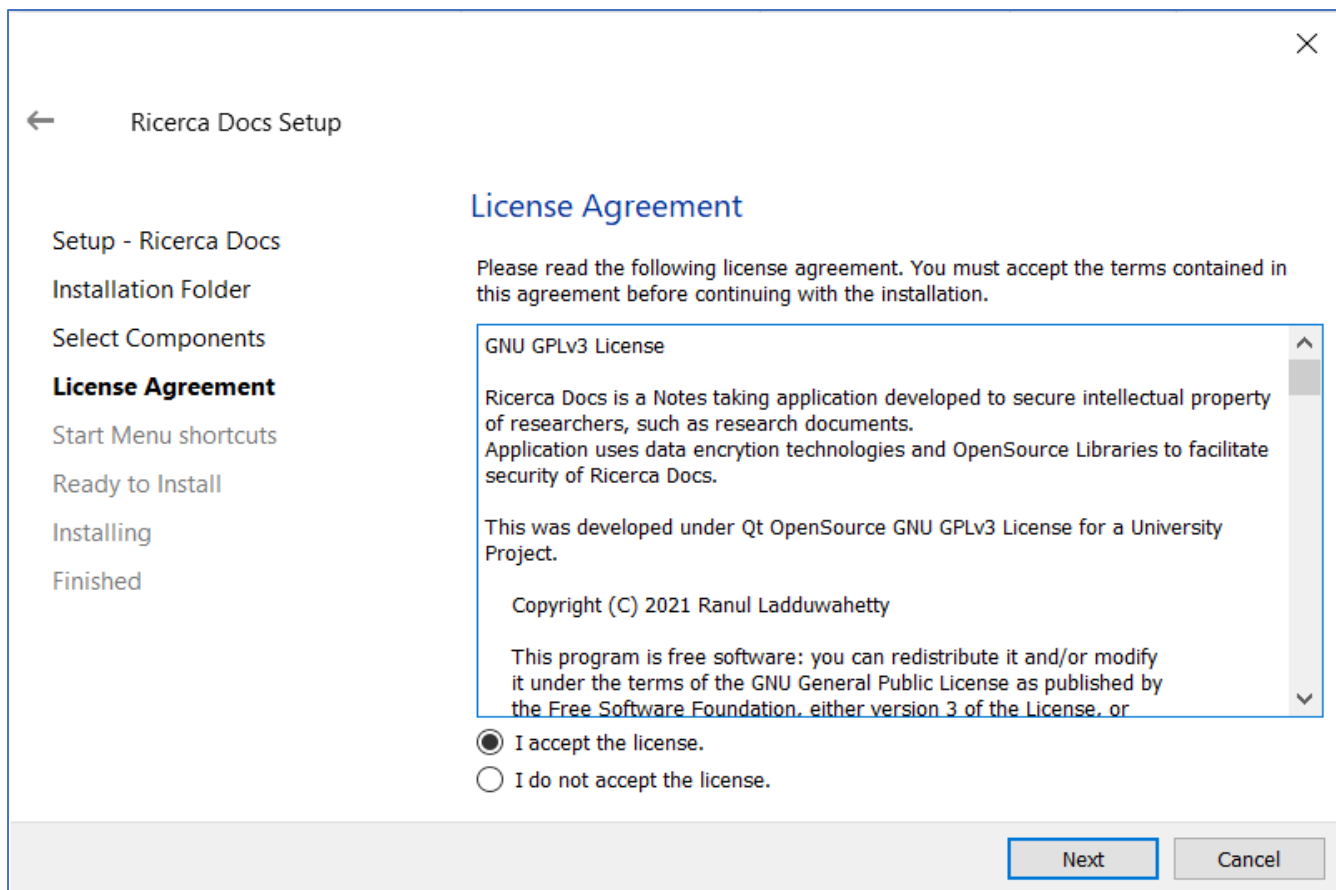

You will be presented with a Welcome screen click next to continue

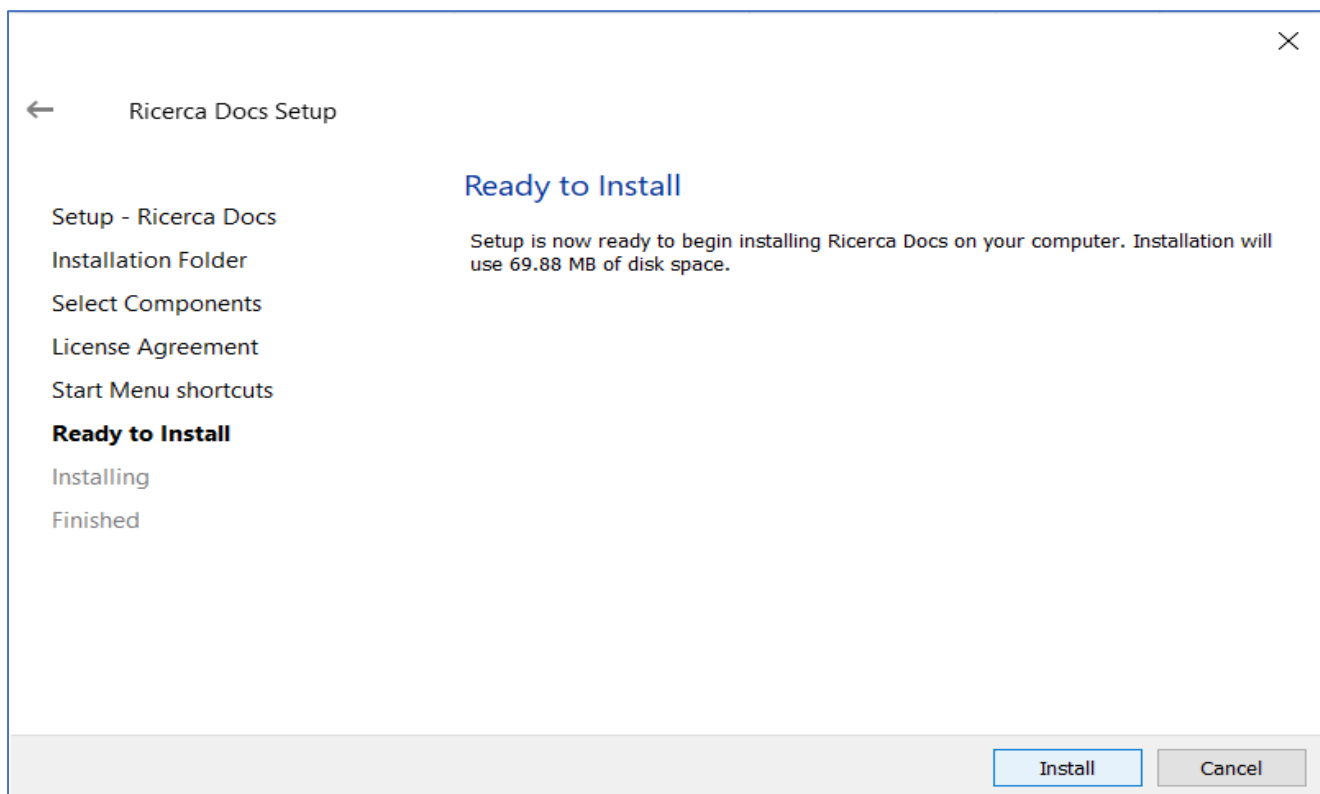

Currently only the main component is available with the initial release, make sure to check this if not checked by default, otherwise the installation will not proceed.

Remember this same installer will be updated so the application update process is made much easier for you.

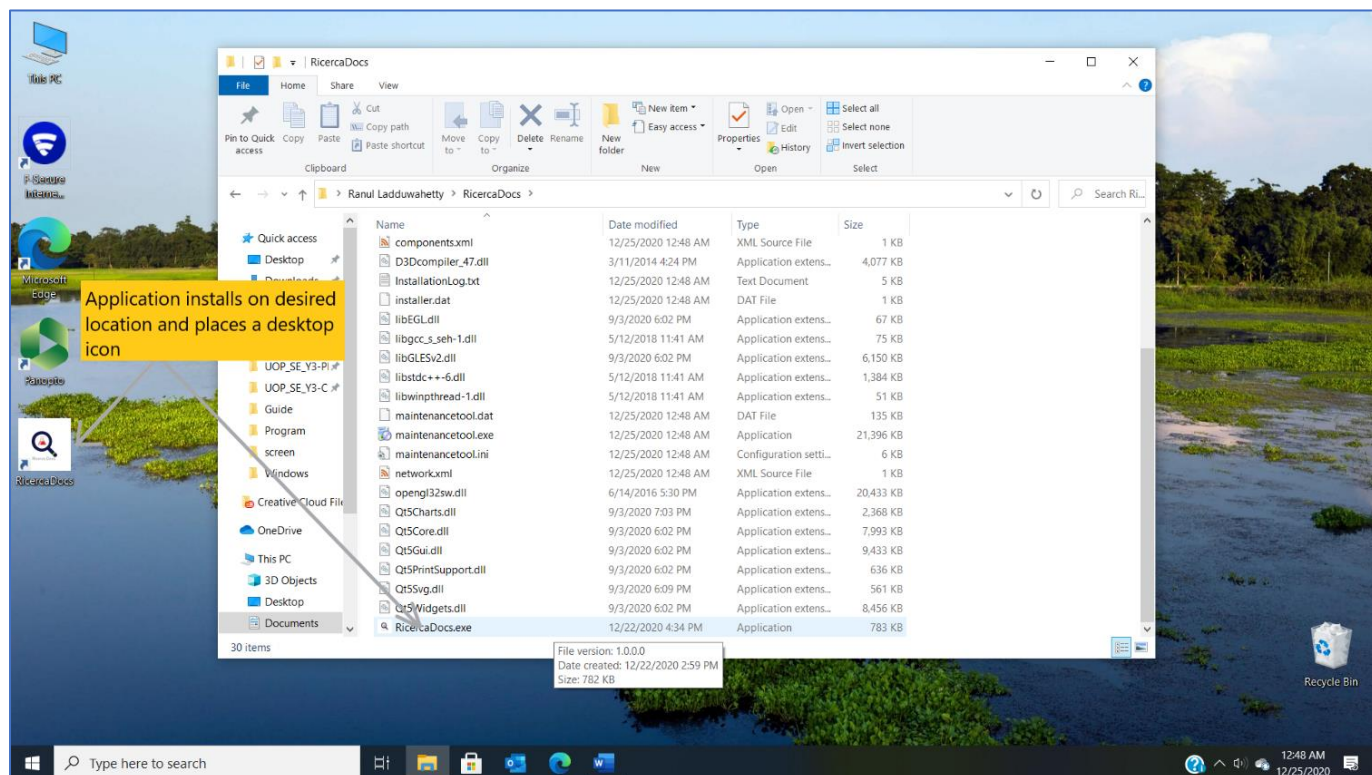

Please read the license agreement and copyright statement and accept license to continue installation

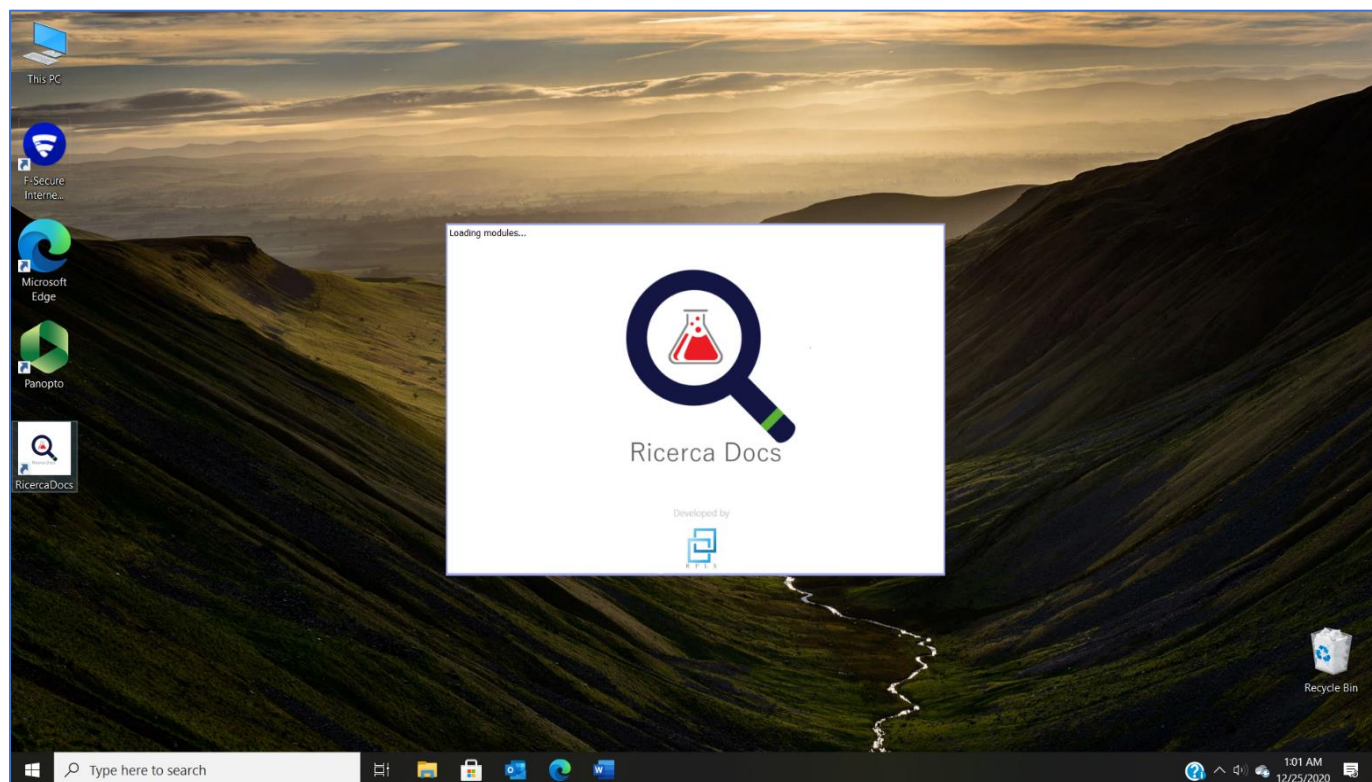

Full installation would consume about 70MB of your storage space, click install to begin the installation process.

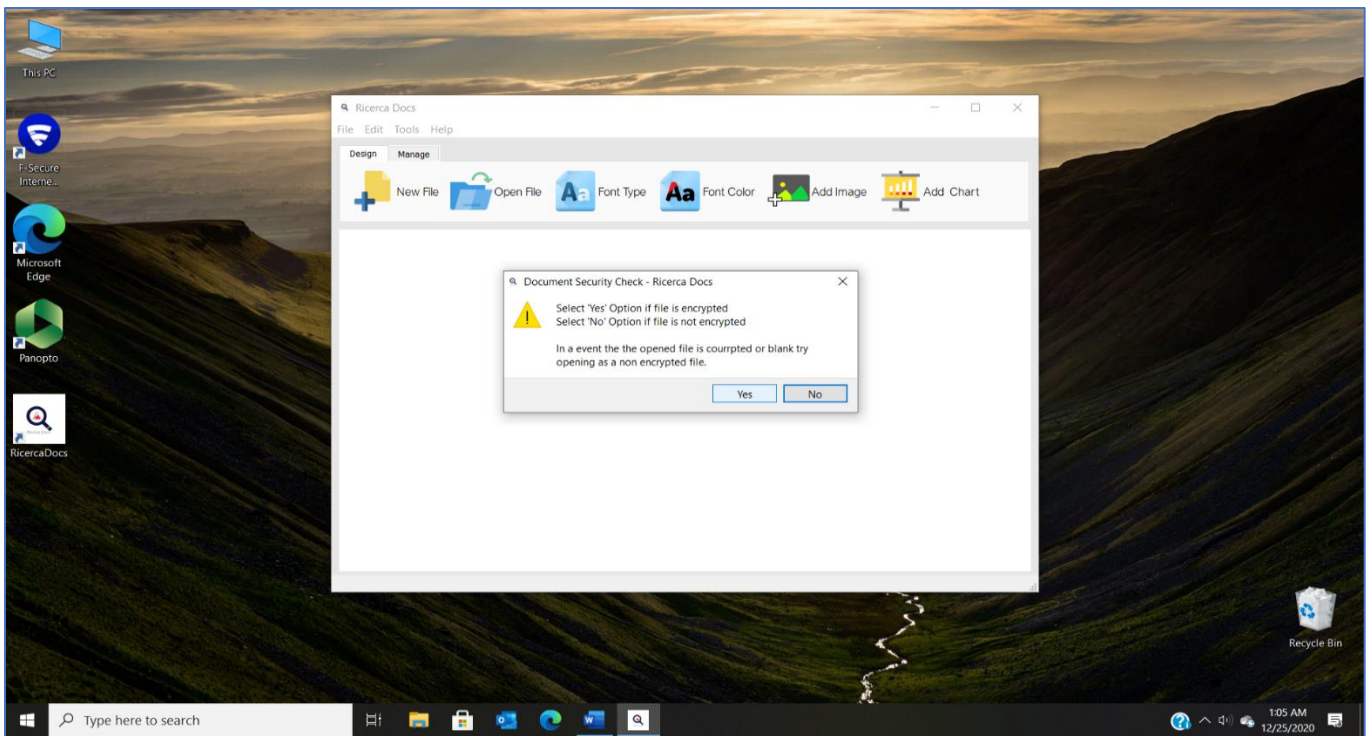

APPLICATION OVERVIEW

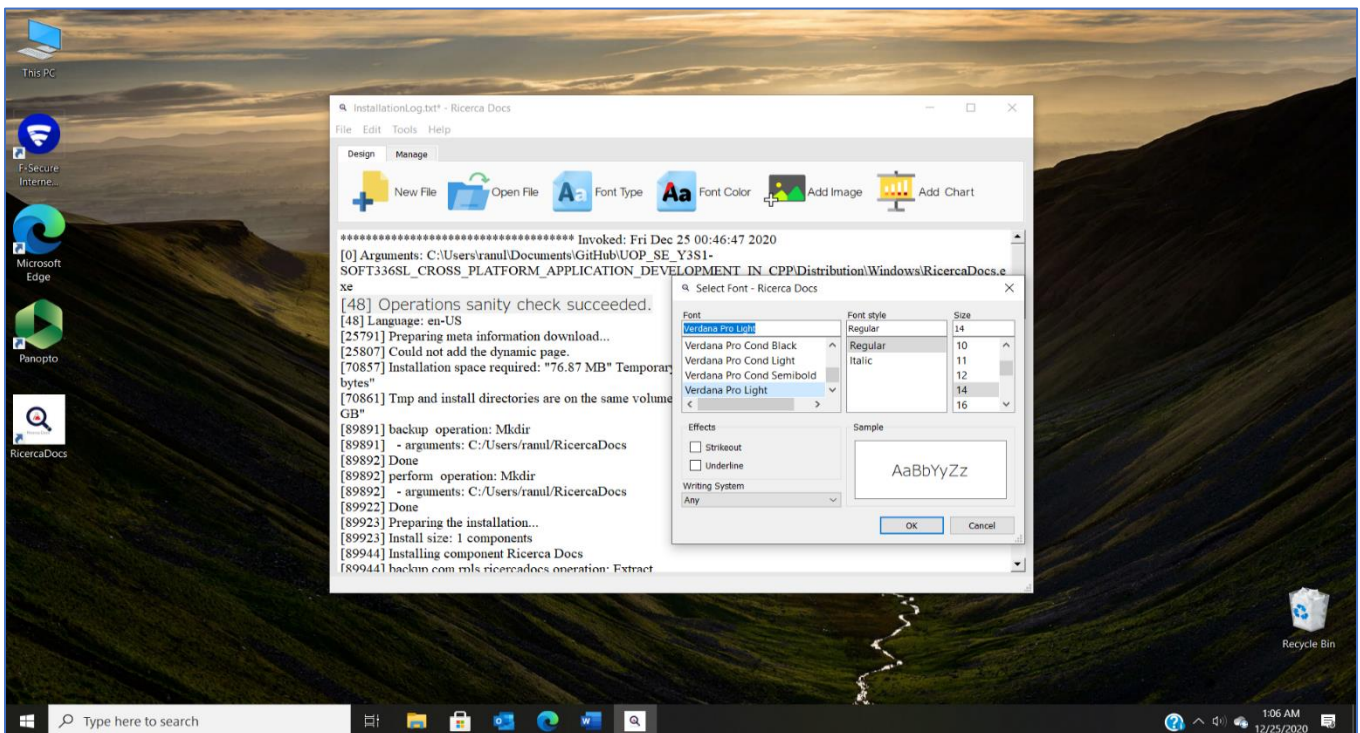

Once installed you will find a desktop short has been placed and the installation has placed files on the selected installation directory. Double click the Ricerca Docs icon on the Install folder or desktop icon to start the application.

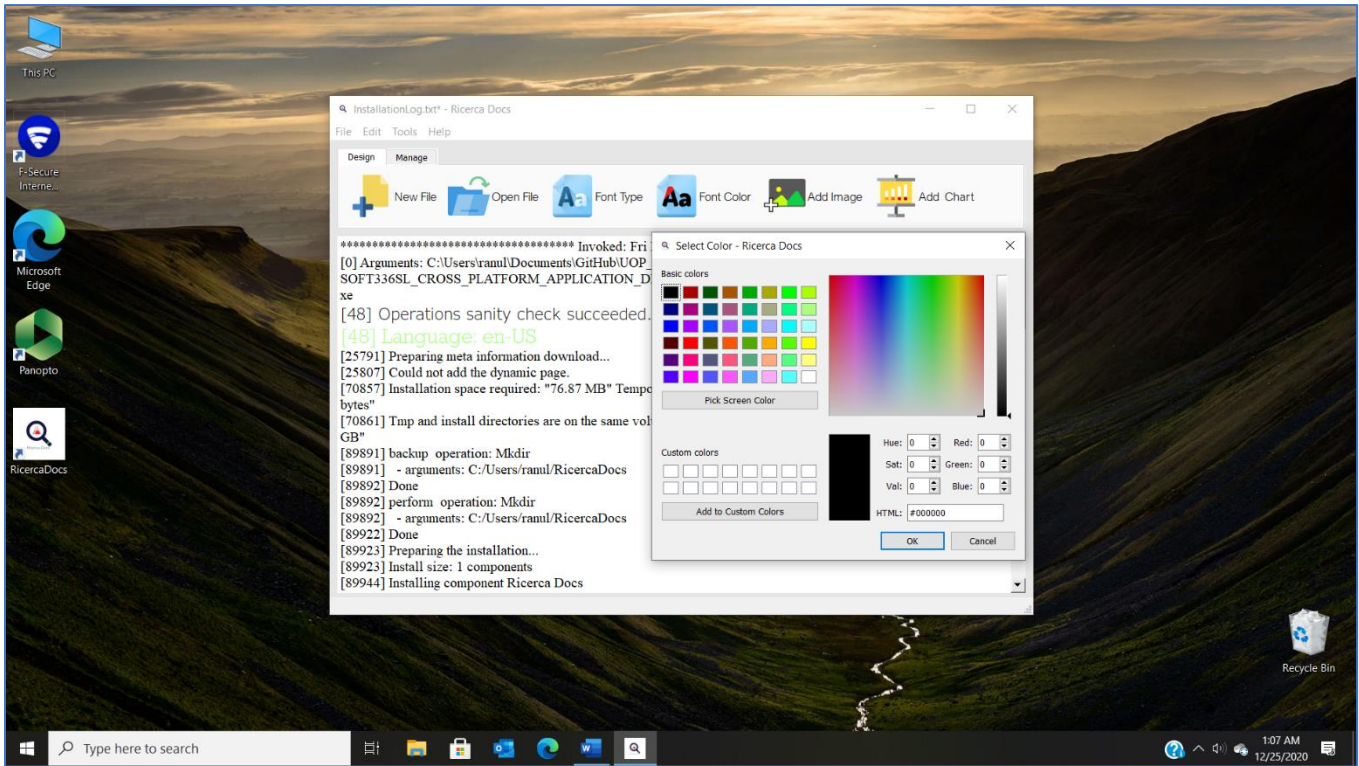

App will show a start screen till it loads all files for functioning, please wait till the screen disappears.

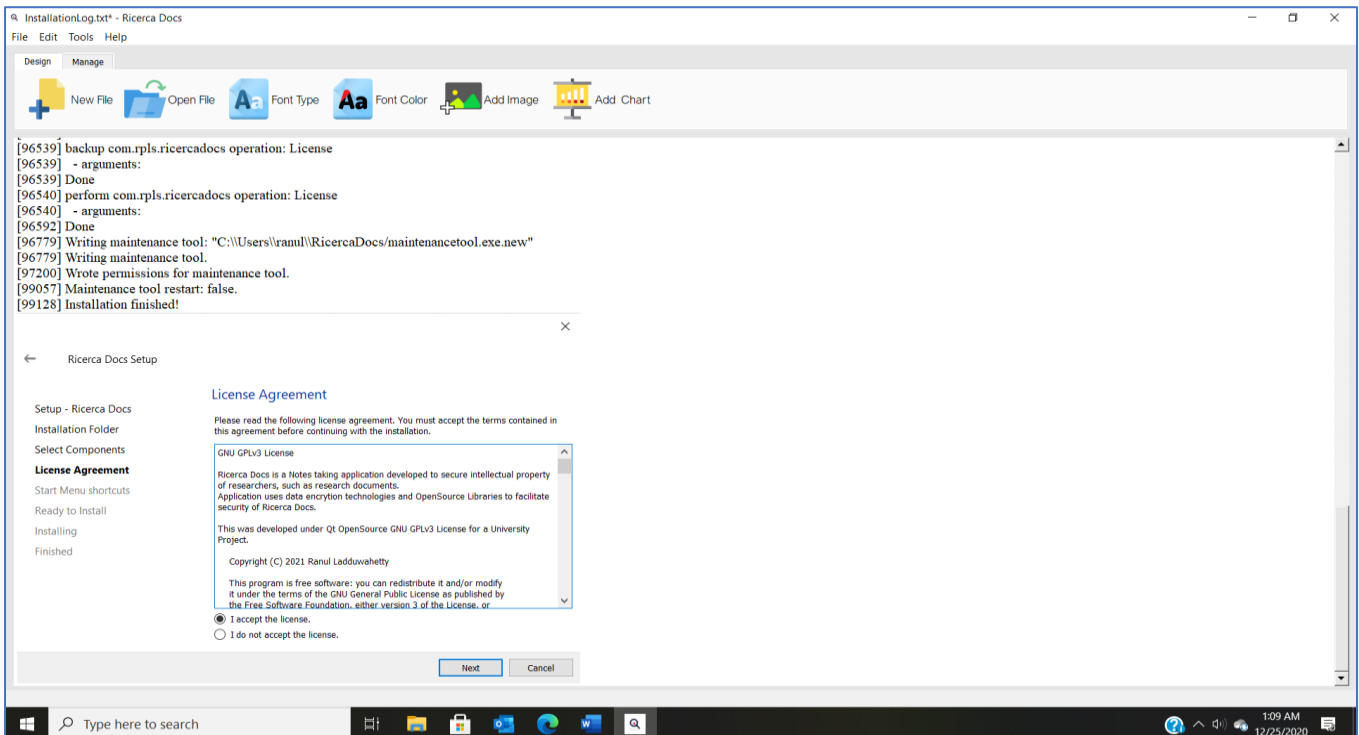

You may any text document to the application for encryption or further editing if the file you try open is not encrypted please select No when the above dialog appears. Note: Files not encrypted by Ricerca Docs cannot be decrypted by the application.

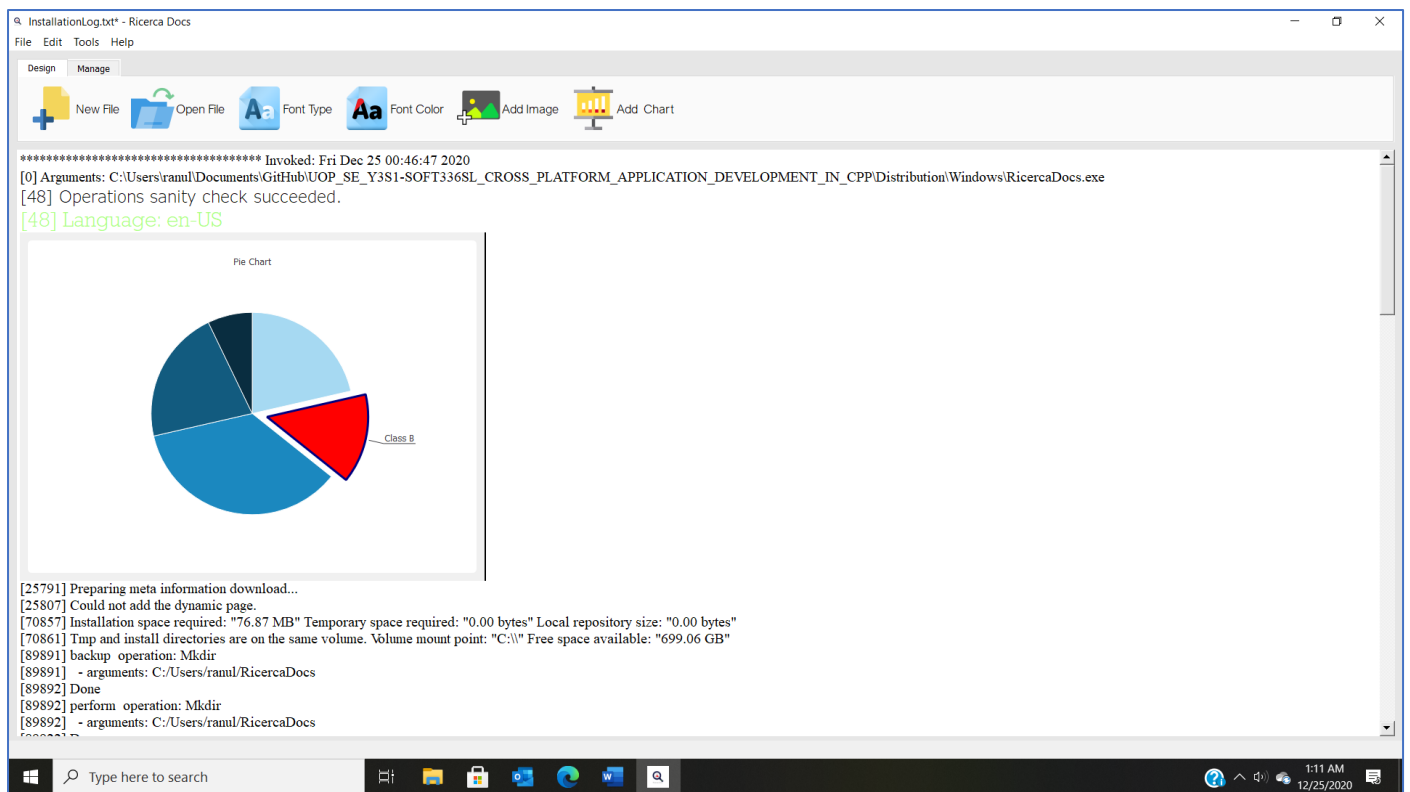

You may click Font Type to change the font style of the text in the document

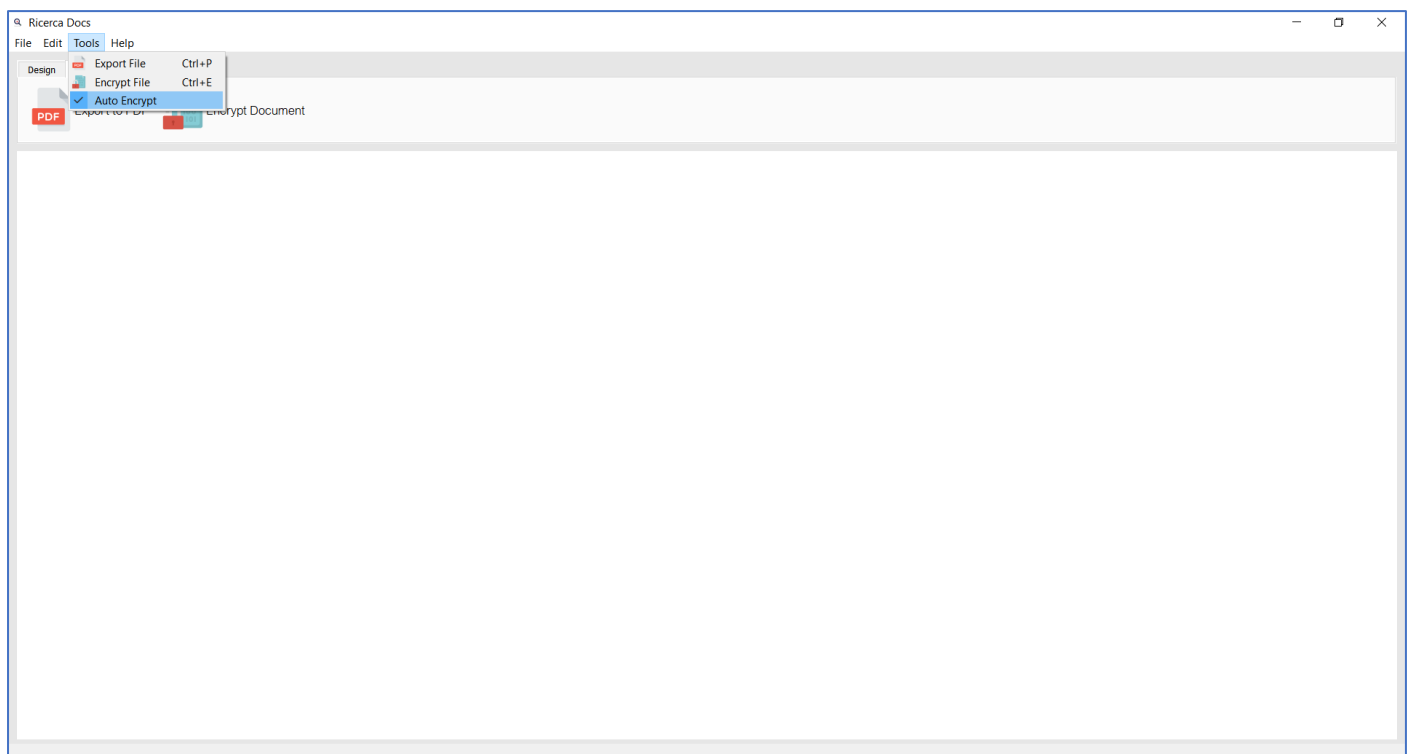

Font color could be change by clicking the Font Color button on the app, you will get your native color pallet on Windows or Mac

If you need to add image click Add Image and make your selection, Only JPEG, GIF and PNG files are supported

Click Add Chart to add charts, you will have to choose a type and provide data for generating the chart

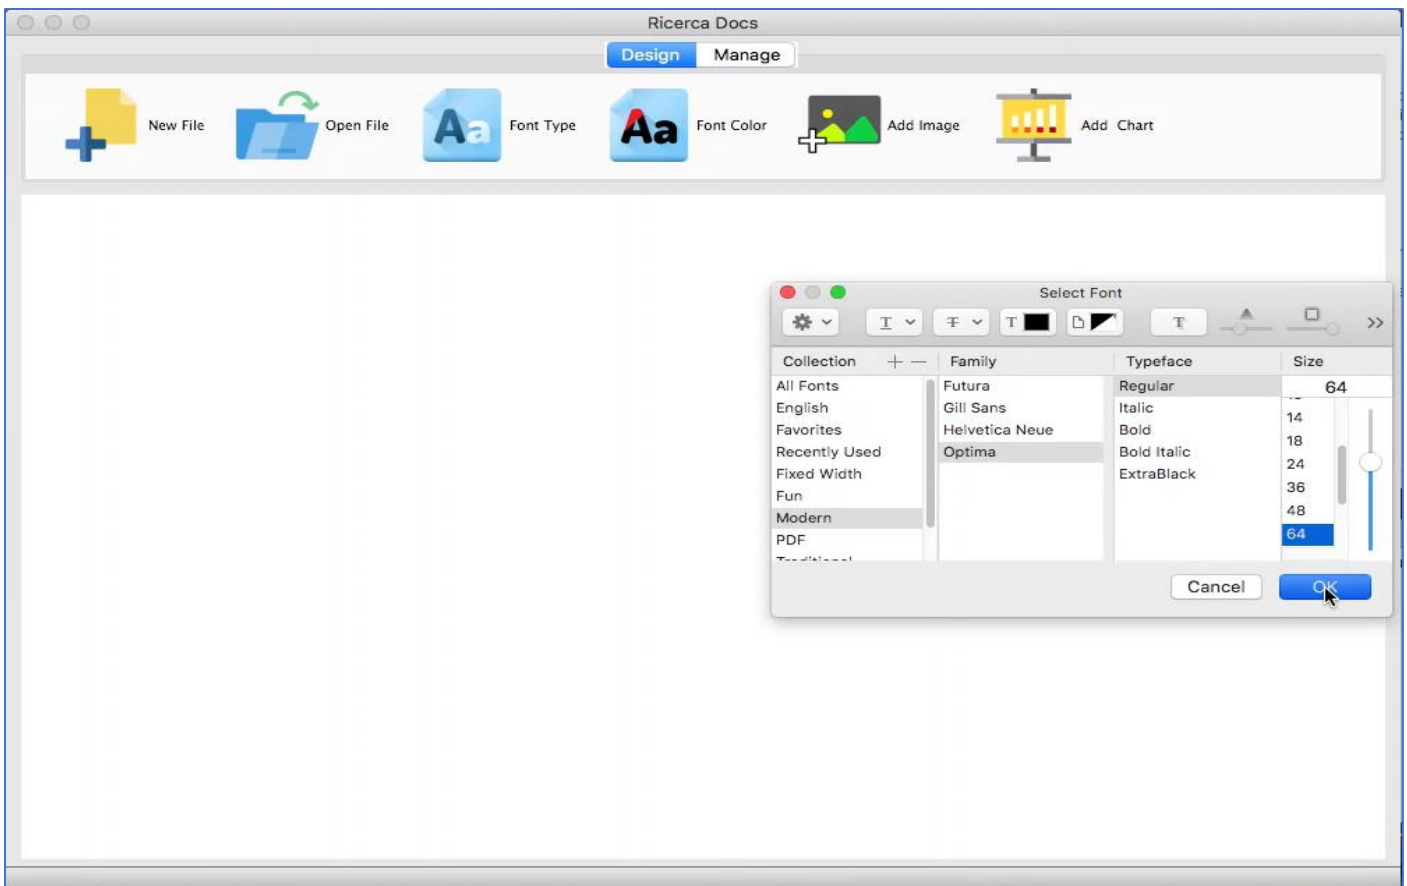

You may enable auto encrypt to save file encrypted automatically when saving, other wise files will save without encryption.

File could be exported to PDF by clicking the Export File button, document could also be encrypted manually by Encrypt Document button

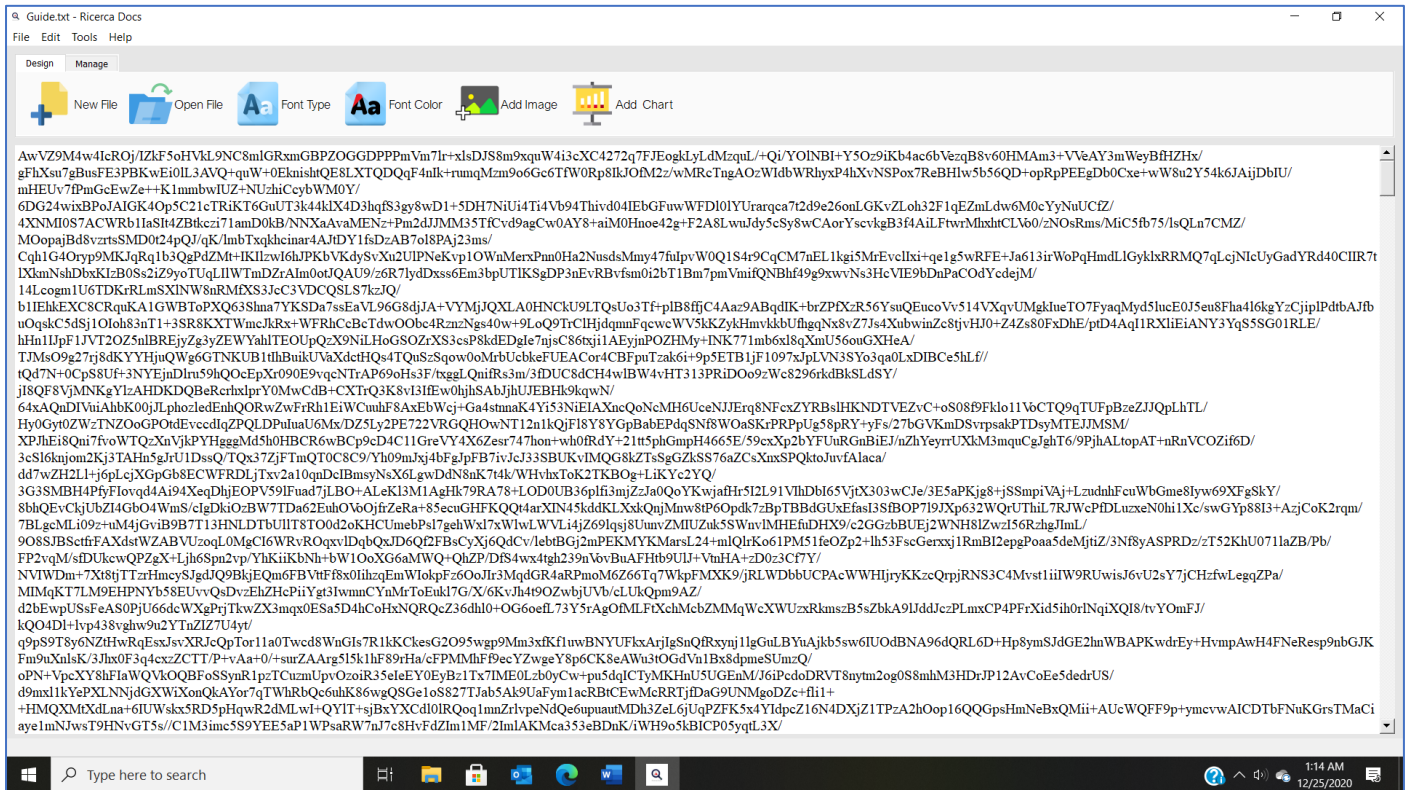

You will get an A4 size printed PDF file once requested

Your Ricerca Docs application would install similarly to windows installation and present the same view and capabilities on the Mac Version

TROUBLESHOOTING

If you see the following trace reopening the document, this time select **Yes** when prompted whether the file is encrypted, if you see a blank document when a document is opened which has data try reopening it with **No** option.
